

# Python Virtual Env - VS Code

## - .venv Terminal

## "Activate.ps1 cannot be loaded"

This is caused by execution policy of PowerShell.

We can fix it by adding "-ExecutionPolicy Bypass" in settings.json.

Ctrl + Shift + P > type **settings.json** > Add the below lines

```
"terminal.integrated.profiles.windows": {  
  "PowerShell": {  
    "source": "PowerShell",  
    "icon": "terminal-powershell",  
    "args": ["-ExecutionPolicy", "Bypass"]  
  }  
},  
"terminal.integrated.defaultProfile.windows": "PowerShell",
```

Restart VS Code
